

Perforating, slotting, and closing machine **PDZ 500 Profi**

The PDZ 500 is a table machine with manual lever operation; it is intended for perforation of paper, plastic, rubber, CTP plates (metal masters) and for slotting. Individual functions of the machine are ensured by using interchangeable tools. Tool variability in a range of cutting, slotting and closing tools is very wide and it significantly increases its usable properties. Its robust cast iron structure provides operational reliability and a long service life.

Technical data:

Maximum operational speed:	It depends on the operator's performance
Maximum length of perforation and a slot:	500 mm
Thread diameter:	1-6 mm by default, higher diameter is also possible, or 4x4 mm, 3x8 mm etc.
Height of operating space (hole):	1/4"; 5/16" up to paper thickness of 6.5 mm, 3/8" up to paper thickness of 8 mm
Height of operating space (hole):	2 mm
Surface of the operating table:	560 x 560 mm
Height of operating surface:	100 mm
Dimensions of the machine:	560 x 560 x 180 mm
Weight of the machine:	22 kg
