

## OFFSET PRINT MACHINE TRUCK

The truck is used for easier handling with printed material that has to be put into the offset machine. The truck can be used separately for travel of material piles, but its advantages are fully of use in turning of piles with a manual palette turner MOP 720. In that case, two trucks replace the bottom and the upper palette of the turned-up paper. After pile turning, the attendance drives the material to the printing machine and with the aid of openings for loading pins of the machine puts the layer into the feeder.

A steel welded frame and a plate of plywood with a thickness of 26 mm ensure its robustness. In case of ordering the trucks can be custom-made in dimensions according to the customer's requirements.

### BASIC TECHNICAL DATA:

- welded rugged structure with powder coated surface
- transport wheels for high loading
- transport of material up to a size of B2
- type dimensions: (width x length x height) 570 x 720 x 150 mm
- total loading capacity: 720 kg

**MADE IN CZECH REPUBLIC, EU**
