

## Lever table cutter - “Pappschere” PN 1300 PROFI

Hand lever cutter (Pappschere) is a necessary equipment of every polygraphic workshop. The cutter is estimated for paper, cardboard, soft plastic foils, board cutting, both from format and from paper rolls. This robust cutter is produced from the steel parts with surface finishing and a laminated table board that ensures an easy shifting of materials to be cut. The lever with a special knife is balanced with a counterweight. The cutting is precise even in a minimum shearing width. The locking adjustable stops ensure cutting repeatability without dimensional deviations. Both knives, a movable one as well as a stationary one, are removable due to sharpening and they are and their position is adjustable. The recommended thickness of layer to be cut is 3 mm due to accuracy. The cuttings are caught in a tank and do not fall on the workplace floor. The supporting steel structure provides the equipment with a necessary rigidity and a long-term usability with precise results. The “Pappschere” can be equipped with an auxiliary holder with an arrestment for cutting of materials from rolls up to a width of 1 300 mm.

### Technical data:

Dimensions of equipment (length x width x height)	2 144 x 948 x 1 265 mm
Dimensions of working area/table height	1 385 x 790 mm/806 mm
Cut length/minimum – maximum cut width:	1 300 mm/0 – 600 mm
Maximum cut thickness/ recommended layer:	5 mm/3 mm
Maximum sheet/roll width:	1 300 mm
Weight:	360 kg
